

If you are are planning to use both the configurator and the actions you will need to load both. Each has different “calls” to Photoshop based on the functionality of the configurator.

If you are planning to use the Configuator and the Wacom presets, you will need to install both sets of actions.

If you are planning to use the Wacom Presets you will not need to also download the actions, as they are already part of the zip (with shortcuts).

These are the shortcuts (Keyboard commands) that were added to the actions in Photoshop using Photoshop’s create keyboard command functionality.

OZ2K		Keys PC
	Channel Comparer	F2
	Convert to Gray to RGB	F9
	Convert with Blend Mode	F5
